| <b>Beschreibung</b>                                                                 | <p>LOCTITE® 577™ - Flasche 50ml</p> <p>Wird für das Sichern und Dichten von Rohrgewinden und Anschlussstücken aus Metallen eingesetzt. Eignet sich besonders für den Einsatz auf Teilen aus Edelstahl, ohne dass es erforderlich ist, die Oberflächen zuaktivieren. Das Produkt härtet unter Luftabschluss zwischen engangliedenden Metallflächen aus und verhindert selbständiges Losdrehen und Undichtheiten durch Stöße und Vibrationen. Durch sein thixotropes Verhalten verringert LOCTITE® 577™ das Abwandern des flüssigen Produktes nach der Auftragung auf das Bauteil.</p>                                                                                                                                                                                                                                                                                                               |                   |             |

| <b>Beschreibung</b> | LOCTITE® 577™ - Flasche 50ml<br>Wird für das Sichern und Dichten von Rohrgewinden und Anschlussstücken aus Metallen eingesetzt. Eignet sich besonders für den Einsatz auf Teilen aus Edelstahl, ohne dass es erforderlich ist, die Oberflächen zuaktivieren. Das Produkt härtet unter Luftabschluss zwischen enganliegenden Metallflächen aus und verhindert selbständiges Losdrehen und Undichtheiten durch Stöße und Vibrationen. Durch sein thixotropes Verhalten verringert LOCTITE® 577™ das Abwandern des flüssigen Produktes nach der Auftragung auf das Bauteil.                                                                                                                                                                                                                                                                                                                          |                   |             |

| Beschreibung | <p>LOCTITE® 243™ - Flasche 5ml</p> <p>Ist eine universell einsetzbare mittelfeste Schraubensicherung. Dieses Produkt sichert Schrauben, Muttern und Stehbolzen gegen das Losdrehen durch Vibrationen und dichtet gleichzeitig ab. Es ist geeignet für alle Metalle, einschl. passive Werkstoffe wie Edelstahl, Aluminium und galvanisierte Oberflächen. Es besitzt erwiesene Toleranz gegenüber geringen Verschmutzungen durch Industrieöle, z.B. Motor-, Korrosionsschutz- und Schneidöle.</p>                                                                                                                                                                                                                                                                                                                                                                                                          |            |             |

| Beschreibung | <p>LOCTITE® 577™ - Flasche 50ml</p> <p>Wird für das Sichern und Dichten von Rohrgewinden und Anschlussstücken aus Metallen eingesetzt. Eignet sich besonders für den Einsatz auf Teilen aus Edelstahl, ohne dass es erforderlich ist, die Oberflächen zuaktivieren. Das Produkt härtet unter Luftabschluss zwischen enganliegenden Metallflächen aus und verhindert selbständiges Losdrehen und Undichtheiten durch Stöße und Vibrationen. Durch sein thixotropes Verhalten verringert LOCTITE® 577™ das Abwandern des flüssigen Produktes nach der Auftragung auf das Bauteil.</p>                                                                                                                                                                                                                                                                                                                      |            |             |
