

Filter holder scraper – for the disposal of the coffee puck

# Pro - Fondi

## More effective, faster, clean and silent.

Every espresso coffee serving business has a coffee puck-disposing device. Coffee pucks have to be collected before being disposed of. The traditional solution are the built-in or countertop “knock-boxes”. Some examples:

308002

308011

1080170

1480753

1080162

1480767

The filter holder has to be repeatedly banged onto the knock-box to allow the removal of the coffee puck. Scrupulous and professional barista finish up the cleaning

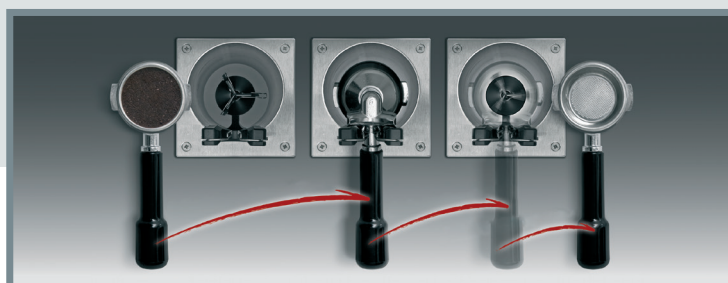

using a brush to remove hidden residues. This procedure not only makes unpleasant noise, which destroys customers' comfort, but it also causes serious traumas

to the operator's arm (fingers, wrist, forearm), leading to painful inflammations to tendons in the long run, with subsequent absence from work.

In order to prevent serious problems caused by the use of the knock-box, Kreba is suggesting the electrical brush Pro-Fondi as your choice and solution.

Inserendo il portafiltro nell'incastro del Pro - Fondi inizia a ruotare una spazzolina accoppiata ad un motore elettrico da 12 VDC. Il portafiltro viene perfettamente pulito senza rumore e stress dell'operatore. Il fondo del caffè cade direttamente nel

sacco sotto al banco. In questo modo si eliminano i cattivi odori e si mantiene perfettamente pulito il banco di lavoro a vista del cliente, con un sostanziale miglioramento dell'igiene dell'ambiente e di lavoro.

Filter holder scraper – for the disposal of the coffee puck

# Pro - Fondi

## Technical features and advantages

- Optimization of filter cleaning improving the result in your cup (according to tests performed in roasting labs)
- It prevents the mat from becoming dirty
- No need to resort to filter holder bangs, consequent improvement of the acoustic comfort
- It prevents filter replacement and group abrasions
- It is faster than traditional knocking
- It prevents traumas to arm and shoulder
- Hygienically collects and disposes of coffee pucks
- It does not require particular cleaning and maintenance
- It eliminates the bulky old knock-box
- A large number of coffee pucks can be disposed of in one single bag
- It prevents the presence of insects caused by coffee scattered under the floor-mat

Pro - Fondi is doubtless the most modern, efficient and silent solution to clean filter holders and simultaneously collect and dispose of coffee pucks. Its use is recommended to all catering businesses but mostly bars, where coffee consumption is very high (i.e. bars near

railway stations, bus stations, airports, etc.). One should not forget that coffee consumption is strictly connected to peak hours, during which brewing frequency is very high. Pro - Fondi can be the best option for all businesses, not only high standard ones.
